

Healthy Food Policy

Seafood is known for its health aspects related to the high content of biologically valuable proteins and the presence of unsaturated fatty acids. In addition, seafood is a rich source of a number of micronutrients. The high content of protein in particular and, depending on the species, fat, inevitably leads to a high calorific value for these products. We firmly believe that seafood products are extremely healthy foods. In our [PP Group CSR Policy](#) we elaborate more on our activities regarding food safety.

We take great care not only of compliance with legal standards and food safety standards of our products, but also of optimizing the health aspects of our products. The use of trans-fats in our products is close to zero. The use of preservatives in products where this is customary has almost completely been replaced by a preservation with natural acidity regulators. These natural substances are completely harmless when it comes to health effects.

Since the calorific value of PP Group products is derived entirely from nutrients that make a healthy contribution to a responsible lifestyle no improvement targets are set addressing this element.

Our target is to reduce the proportion of sodium in those products that have undergone specific processing involving sodium-containing compounds by 10% before the year 2030.

Questions?

If you have questions about this policy or wish to raise a concern please contact the CSR Department of PP Group via csr@pp-group.eu or telephone number +31(0)71 789 00 00 (Monday-Friday during office hours).

This policy, our procedures and internal audits are designed to ensure that PP Group complies with all applicable laws and regulations and will be reviewed and updated on a regular basis to ensure that it remains current and effective.
